

Ways to Teach SAFe Remotely

No matter your context, SAFe courses have a delivery method for you. There are three primary methods:

- **SAFe Virtual Classroom** - Use SAFe Collaborate, an online virtual workspace for idea generation and decision making, to run class activities. With fast setup and an engaging learning environment, it is the best choice for SAFe courses.
- **Remote Delivery Enabled (RDE) SAFe Courses** - For classes versioned 5.0.1 and above, activity slides are included in the courseware kit and are compatible with many technologies and training environments. These slides can be used directly by learners or uploaded into collaboration spaces.
- **Remote Training Aids (RTA)** - Select classes have activity slides available directly in the SAFe Community Platform instead of SAFe Virtual Classroom and RDEs. Like the RDEs, they are based on slides for application in a variety of training environments.

To help you choose the best option for your training, please reference this [FAQ](#).
